

December 2016.

La Mesta has been granted a *Gold Recognition Level* by [ECOVADIS](#) showing its high level of Corporate Social Responsibility.

September 2016.

This year, La Mesta invested in a new Hastelloy Filter Dryer able to make 500 kg batches. We also invested in a new workshop dedicated to continuous flow chemistry. This investment will allow us to combine continuous synthesis with continuous washing and decantation. Continuous concentration will be added in 2017.

La Mesta has also taken some participation in an Italian CRO, Fluody (<http://www.fluody.com/>). This allow us to offer the full range of quantities from mg up to tens of tons.

Our sister company EGNO (<http://egno-chimie.com/>) has just installed 2 new reactors (2000 L Hastelloy and 1000 L). EGNO is a specialist in highly pure liquid products. They work in F&F and have a catalog of pheromones.
